

AuditBOT JAVA Dashboard

Deployment Steps

For

SUSE Linux Server

AUDITBOT DEPLOYMENT PROCESS for SUSE Linux Server

1. Update UNIX system with Latest Update (Optional step)

Execute the UNIX command “**sudo zypper up**” **which is optional** but updates all the latest components

2. Unix System Prerequisites:

Your UNIX system should have following applications installed prior to install AuditBOT JAVA Dashboard Application.

1) NODEJS

Check the application if already installed using the UNIX command “**node -v**”. If the command **returns the version**, then skip otherwise execute the UNIX command “**sudo zypper in nodejs12**”

2) JAVA

Check the application if already installed using the UNIX command “**java -version**”. If the command **returns the version**, then skip otherwise execute the below UNIX commands one by one

- “**sudo zypper ar** http://download.opensuse.org/repositories/Java:/Factory/openSUSE_Leap_15.2/ **java**”
- “**sudo zypper mr -p 70 java**”
- “**sudo zypper refresh**” [Choose **Trust always** option for the key]
- “**sudo zypper in java-15-openjdk**” [Choose **Continue** option for install size]

3) UNZIP

Check the application if already installed using the UNIX command “**unzip -v**”. If the command returns the version then skip otherwise execute the UNIX command “**sudo zypper install unzip**”

4) MAVEN

Check the application if already installed using the UNIX command “**mvn -v**”. If the command returns the version, then skip otherwise execute the UNIX commands and steps one by one

- “**cd /tmp/**”
- “**wget -c** <http://mirrors.advancedhosters.com/apache/maven/maven-3/3.6.3/binaries/apache-maven-3.6.3-bin.zip>”
- “**unzip apache-maven-3.6.3-bin.zip**”
- “**sudo mv apache-maven-3.6.3 /opt/maven**”

Then Create a below shell script file:

- “**sudo touch /etc/profile.d/maven.sh**”

Then Edit the file “**sudo vi /etc/profile.d/maven.sh**” to enter below 3 commands

```
export M2_HOME=/opt/maven/  
export M2=$M2_HOME/bin  
export PATH=$M2:$PATH
```

Then execute “**sudo chmod 755 /etc/profile.d/maven.sh**”

Note: - After above steps, execute the UNIX command “**mvn -v**” to make sure that MAVEN application version should be displayed otherwise, please reboot the UNIX server “**sudo reboot**” to ensure that MAVEN application version is displayed.

Please proceed once your UNIX system has above applications installed.

3. Your Local Desktop / Laptop must have following applications

- 1) Install putty
- 2) Install FTP application such as WinSCP

Please proceed once your Local Desktop / Laptop has above applications installed

4. Steps

- 1) You will receive a ZIP file from AuditBOT such as **javaApp.zip**
- 2) Save the ZIP file into your Local Desktop / Laptop
- 3) Open your FTP application such as WinSCP on your Desktop/Laptop then connect to your UNIX server using valid credentials. Once you are connected, FTP the ZIP file **javaApp. zip** into your UNIX system's target directory. This target directory should be any valid directory where you want to keep the ZIP file as well as to install AuditBOT Java Dashboard app.
- 4) After FTP the ZIP file, open your puTTY application on your Desktop/Laptop to open a Telnet session then connect to your UNIX server using valid credentials.
- 5) Unzip the ZIP file such as **javaApp. zip** using the UNIX command "unzip **javaApp. zip** "
- 6) After Unzip, you will see a directory called **javaApp**
- 7) Go to **javaApp** directory inside then Edit the file **SystemConfig.csv** to enter your **SAP Central System's** Logon connection details.

```
ubuntu@ip-172-31-69-133:~/javaApp$ cat SystemConfig.csv
SysId,SysDesc,Client,IP Address,Instance Number,Type ,Message Server,Group Server,SNC Name
EP1,EP1 System,800,108.52.246.122,02,,,,,
SR1,SR1 System,100,108.52.246.122,00,,,,,
```

- 8) execute the UNIX command " **sh build.sh** " which will take 5 to 10 minutes to build the AuditBOT Java Dashboard Application.
- 9) execute the UNIX command " **sudo zypper -n install java-1_8_0-openjdk-devel** "
- 10) After building the application, execute the UNIX command " **sh start.sh** " to start the Java service which is now listening to port 8080
- 11) To confirm the service started successfully, execute the UNIX command " **sudo jps** " which will show 2 entries shown below. You can also execute "netstat -an | grep 8080" which should show an entry
 - Unix Job ID **jps**
 - Unix Job ID **AuditbotApplication**
- 12) After confirming above 2 entrees Then go to any Browser to enter the below URL such as [http://\[Your Company Domain\] :8080/](http://[Your Company Domain] :8080/) to view AuditBOT Logon Page shown below. Then enter your SAP Logon credentials to view AuditBOT Java Dashboard application.

Example: - <http://ec2-3-88-0-12.compute-1.amazonaws.com:8080/>

AuditBOT Java Dashboard Logon Page

The screenshot shows a web browser window with the address bar displaying "Not secure | ec2-3-88-0-12.compute-1.amazonaws.com:8080". The main content area features the AuditBOT logo with the tagline "Compliance Designed Well". Below the logo, there are two dropdown menus: "System" with the value "SR1" and "Client" with the value "100". Underneath these are two text input fields labeled "Username" and "Password". At the bottom center is a blue button labeled "LOGIN".
