

AuditBOT Java Dashboard

Web Application Deployment

Steps

for

Ubuntu Unix Server

AuditBOT Dashboard Web App Deployment Steps

1. Update UNIX system with Latest Update (Optional step)

Execute the UNIX command “**sudo apt update**” which updates all the latest components

2. Unix System Prerequisites:

Your UNIX system should have following applications installed prior to install AuditBOT Dashboard web Application.

1) NODEJS

Check the application if already installed using the UNIX command “**node -v**”. If the command returns the version then skip otherwise execute the UNIX command “**sudo apt install nodejs**”. Then install NPM using the UNIX command “**sudo apt install npm**”. Then execute the UNIX command “**sudo npm install -g n**”. Then execute the UNIX command “**sudo n stable**”

2) JAVA

Check the application if already installed using the UNIX command “**java -version**”. If the command returns the version then skip otherwise execute the below UNIX commands one by one
“**sudo apt install default-jre**”
“**sudo apt install default-jdk**”

3) MAVEN

Check the application if already installed using the UNIX command “**mvn -v**”. If the command returns the version then skip otherwise execute the UNIX command “**sudo apt install maven**”

4) UNZIP

Check the application if already installed using the UNIX command “**unzip -v**”. If the command returns the version then skip otherwise execute UNIX command “**sudo apt-get install zip unzip**”

5) CURL

Check the application if already installed using the UNIX command “**curl -V**”. If the command returns the version then skip otherwise execute the UNIX command “**sudo apt install curl**”

6) Set the Specific version of NODE application which is crucial to successful deployment

Execute below 6 commands one by one from UNIX prompt.

```
sudo su
curl -o- https://raw.githubusercontent.com/nvm-sh/nvm/v0.39.3/install.sh
curl -o- https://raw.githubusercontent.com/nvm-sh/nvm/v0.39.3/install.sh | bash
source ~/.bashrc
nvm install v10.19.0
exit
```

Please proceed once your UNIX system has above applications installed.

3. Your Local Desktop / Laptop must have following applications

- 1) Install putty
- 2) Install FTP application such as WinSCP

Please proceed to Steps # 4 once your Desktop / Laptop has above applications installed (putty & Winscp)

4. Steps

- 1) You will receive a ZIP file from AuditBOT such as **javaApp.zip**
- 2) Save the ZIP file into your Local Desktop / Laptop
- 3) Open your FTP application such as WinSCP on your Desktop/Laptop then connect to your UNIX server using valid credentials. Once you are connected, FTP the ZIP file **javaApp.zip** into your UNIX system's target directory. This target directory should be any valid directory where you want to keep the ZIP file as well as to install AuditBOT Dashboard Web app.
- 4) After FTP the ZIP file, open your puTTY application on your Desktop/Laptop to open a Telnet session then connect to your UNIX server using valid credentials.
- 5) Unzip the ZIP file such as **javaApp.zip** using the UNIX command "unzip javaApp.zip"
- 6) After Unzip, you will see a directory called **javaApp**
- 7) Go to **javaApp** directory inside then Edit the file **SystemConfig.csv** to enter your **SAP Central System's** Logon connection details.

```
ubuntu@ip-172-31-69-133:~/javaApp$ cat SystemConfig.csv
SysId,SysDesc,Client,IP Address,Instance Number,Type ,Message Server,Group Server,SNC Name
EP1,EP1 System,800,108.52.246.122,02,,,,
SR1,SR1 System,100,108.52.246.122,00,,,,
```

- 8) Execute the UNIX command "**sh build.sh**" which will take 5 to 10 minutes to build the AuditBOT Java Dashboard Application.
- 9) After building the application, execute the UNIX command "**sudo sh start.sh**" to start the Java service which is now listening to port 8080
- 10) To confirm the service started successfully, execute the UNIX command "**sudo jps**" which will show 2 entries shown below. You can also execute "netstat -an | grep 8080" which should show an entry
 - Unix Job ID **jps**
 - Unix Job ID **AuditbotApplication**
- 11) After confirming above 2 entrees Then go to any Browser to enter the below URL such as [http:// \[Your Company Domain\] :8080/](http://[Your Company Domain]:8080/) to view AuditBOT Logon Page shown below. Then enter your SAP Logon credentials to view AuditBOT Dashboard Web application.

Example:- <http://ec2-x-xx-xxxx.compute-1.amazonaws.com:8080/>
